SUMMARY

After successfully completing the Full Stack Web Development BootCamp at CareerFoundry, I am currently gaining practical experience in the field of web development at a startup. In the next step, I would like to further develop my skills as a web developer in a corporate environment. I am available in the short term and am open to familiarizing myself with new, company-specific technologies. My quick grasp of concepts and my willingness to tackle new challenges form the foundation of my success in various situations. Reliability, open communication, and a structured working approach are natural to me. Furthermore, I possess a strong problem-solving ability that enables me to effectively address challenges and develop user-oriented solutions.

WEB DEVELOPMENT SKILLS

Frontend

HTML/HTML5, CSS, JavaScript, TypeScript, Bootstrap, React, React-Native, Angular, Parcel, Tailwind CSS, Svelte

Backend

Node.js, Express, MongoDB, REST API, AWS, Postman

Additional

Jest, Cucumber, Puppeteer, Expo, Canva, Figma, Git, Github

PROJECTS

Chat App

React-Native chat app, built using Gifted Chat and Expo. Has login and chat interfaces. Users can send messages, images and location as well as choose a custom color for their interface.

Meet App

React PWA connected to a Google Calendar API. Authentication using Google Auth. Users can choose venue or type of event to get both list of events and stats about them.

MyFlix

REST API created with JavaScript, MongoDB, Express and Node.js. Created two similar frontends, one with React and one with Angular. Users can register, login, browse collection of movies, view info about movies and add/remove movies from favorites.

To-do List

Built using HTML, CSS and jQuery. Users can create a to-do list. Items can be added, crossed out, rearranged and deleted.
